

System Operations & Maintenance

Validating continuous data collection is integral in providing quality assurance to monitoring programs. ICT Internationals' trained scientists and engineers can conduct routine site maintenance and calibration checks to ensure high quality data collection. Operation, maintenance and technical services include:

- Sensor calibration and calibration validation
- Instrument repairs
- Physical site maintenance
- Sample collection and processing
- On-site training
- Data review and interpretation
- Site reporting
- Hire instrument deployable and retrieval

With flexible contract arrangements, ICT International can implement a systems operation contract to fulfil the requirements of any monitoring project.
